EMERGING CHALLENGES IN MODERN RESEARCH

There are a lot of challenges which the growing economies face in the realms of basic necessities in life. It is very important that different stakeholders unite and collaborate on issues which confront the society. One of the key objectives of research should be its usability and application. The key focus would however be the emerging sectors and research which discusses application and usability in societal or consumer context whether individual or industrial.

This journal attempts to document and spark a debate on the research focused on dentistry in context of emerging geographies. I extend a warm welcome to the dental and biomaterial fraternity toward the readership and active contribution to the journal of dental specialties. The prime objective of this journal is to promote scientific research of high quality, innovative case report and series, and Meta-analysis of upcoming biomaterial and treatment modalities in the dental world. We intend to add a special section of clinical Tip which aims to provide clinicians with extremely important tips to approach clinical cases with scientific evidence based approach.

I am extremely grateful to the Authors for considering this Journal for their submissions. I acknowledge the role of my reviewers for meticulously screening the scientific content being submitted to the Journal. I am grateful to the advisory board of the Journal for working hard towards taking this journal to greater heights.
